Draft

I am a friendly shark and I am writing because we are going to become extinct like dinosaurs since humans' selfish and irresponsible behaviours,.

The first problem we are facing is hunting. Some restaurants still provide shark fin soup nowadays. Chefs use our fins in order to make the soup. A lot of fishermen hunt us for our fins and meat. Therefore, plenty of sharks have died and become endangered. People should stop drinking shark fin soup to avoid from us disappearing completely.

The second problem we are facing is water pollution. Untreated sewage is discharged directly into oceans, harming marine animals. It can also affect humans' health. To minimise water pollution, the government should treat sewage before discharging it into the sea. People should reduce sewage by using bath water to wash the floor.

The third problem we are facing is losing our food sources. Fishermen catch too many fish. Therefore there isn't enough for us to eat, so that we will starve death. We will become extinct unless the fishermen stop catching excess amount of fish and releasing the small fish back into the sea.

Please share our experiences to others and urge people not to drink shark fin soup and dump waste into the sea anymore. Please ask fishermen to stop overfishing too. Furthermore, encourage the public to donate money to charities that support wildlife and the environment. Thank you for reading this article!
